Marcus Rothoff

Full Stack Developer

I am a passionate Full Stack developer with a commitment to innovation and quality. I have a composite background in several different areas including Photography, Copywriting, Customer Security, and then I found software development. With a broad foundational knowledge of Full Stack Developing and all it entails I can develop an app from the ground up with a proper UX-design, security details, and front- and backend code - all combined and deployed with an Agile mindset. I have a knowledge of e-commerce development and practices from my own projects starting from the creation of a brand to the completion and delivery of a deployed and functioning product. Challenge drives me in my Web Development, whether it's deep-diving into AWS buckets or centering a div. I am a firm believer in the idea of an open atmosphere where constructive feedback is key to move the team and their work forward in an efficient way.

Experience

Kundsäkerhetsspecialist

Fotograf

Copywriter

Background

Full Stack Developer

Diploma from Code Institute

Diploma in Economics from Röllingby Gymnasium

Competences

HTML, CSS, Javascript, React, Python, Flask, Django, Heroku, AWS, PostgreSQL, Sqlite3, Bootstrap, Stripe, jQuery, Pytest & Jest

Selected experience

Kundsäkerhetsspecialist

Blocket AB, Q3 2018 – Ongoing

Blocket is the leading online marketplace in Sweden. As a Customer security specialist I've worked securing qualitative anti-fraudulent security for users by proactive optimization of publication-processes as well as reactive monitoring procedures in messaging systems and audits.

I'm responsible for an information-sharing alliance between Blocket and other companies to broaden the chance of fraud prevention.

In addition I'm coding custom email-templates for several departments, as well as maintenance and updates. UX-designing and solely rebuilding Helpdesk, spanning several brands, through Zendesk CRM.

Copywriter

Vitvaruexpertern AB, Q1 2018 – Q3 2018

As a newly started player in the home-appliance industry of e-commerce I was hired to write and implement SEO-compliant product texts that gained traffic from Google. Texts which included suitable "key-search-terms" in accordance with the product description and USP:s.

In addition assisted with handling packages and day-to-day start-up tasks.

Assignments

Barnskötare

Silverdalsskolan, Q1 2013 – Q3 2015

Responsible for and mapped the education and day-to-day things for a boy with Cerebral Pares. This entailed strict routines and a specialized way of handling subjects for their best possible well-being as well as their development.

Photographing traveller

The World, Q3 2016 – Q1 2018

Solo-travelled to the very ends of Asia for one and a half years. From landing safely in a tiny Bungalow to ending up stranded in a place where I had to overcome language barriers as well as physical barriers. Problem solving was a key advantage which kept improving over the countries. To hiking up a mountain for a photograph only to almost fall down a cliff on the way down. All with the purpose of documenting it with a Camera.

Passion Projects - *links in github/linkedin*

Fabrizio von va bene - A secret bar

I am passionate about combining websites with stories whether it's in its writing or images or code. I wanted to create a simple one-page website of a man, his dog, and his aim to have a bar, but preferably not one that had too many people in it. It's currently in its stage of first draft, but in the scope is adding hidden easter-eggs and clues to riddles to match the mans "I'd like to stay hidden and alone with my dog, but the most deserving are welcome in"

Quarrel - where disputes are solved

My interest in technology is always connected with technologies possible drawbacks for society. As well as it's sometimes apparent way of getting people to end up in arguments with not one twitter-user, but several, and the argument never seems to end, nor actually declare a winner that can say: Hey, I am correct. Let's move on to another subject. A democracy, if you will. Quarrel was born out of that idea: What if both users could simply type their argument, of anything - whether it's about climate, a personal issue, relationship issues - and simply ask the internet who's correct?

Currently working on the re-imagination of rebuilding it in react and turn it into a Twitter, but where arguments are forced to be solved.

Dropp. - e-commerce app for canned water

I created a climate-conscious brand called Dropp. A complete catalogue of products containing of four cans as well as the additional merchandise to fit the brand. The site is a fully functional e-commerce platform, fitted with Stripe checkout and order history. The products are connected to a review- and comment system. Users are able to view their order-history and re-order previous orders or simply add favorited ones.

Memory - a memory App

A fully javascript based memory game aesthetically pleasing to the eyes with its included day- and night choice of theme. The overall theme is of famous cities with its images changed depending on the choice of theme.

Keywords: *Git, Github,, Javascript,, CSS, HTML*

Kol'dan - a Python Hangman game

The game is classic, mostly entirely built in Python, with the aim of following along the story of (the skull of) Kol'dan and guessing the correct word before he corrects you. Filled with level-based "heckles" for the user to stress out about as they try and beat him. The code is scalable with more levels easily added.
